

PARTNERSHIP INFORMATION

FIRST GHHIN SOUTHEAST ASIA **HEAT** HEALTH FORUM

Toward a Heat Resilient Southeast Asia:
Enhancing livelihoods and wellbeing

07 – 10
JAN 25
SINGAPORE

Heat Resilience & Performance Centre
Yong Loo Lin School of Medicine

WELCOME

Dear Partners,

We are immensely excited to announce that the First Global Heat Health Information Network's (GHHIN) Southeast Asia Heat Health Forum will be held in Singapore from January 7 to 10, 2025. As climate change continues to intensify the heat challenges faced by our region, we recognise the need to band together, develop stronger partnerships and collaborative efforts to safeguard the lives and livelihoods of our community.

This first regional forum, hosted by the Southeast Asia Heat Health Hub (SEA HHH) anchored at the Heat Resilience & Performance Centre (HRPC) of the Yong Loo Lin School of Medicine National University of Singapore, aims to provide a unique platform and opportunity to convene the multi-disciplinary regional community, foster meaningful dialogue, and facilitate collaborations to address the pressing issues of heat and health in SEA.

In addition to high-profile international speakers, a select regional audience of about 350 delegates will be invited to bring together important regional thought leadership and strategic health and climate perspectives.

We would very much like to partner with you in protecting and building resilience in our communities from the escalating threat of extreme heat. Your involvement in this forum will definitely help shape the impact we can make for the region.

Thank you!

A/Professor Jason LEE

Chair, Southeast Asia Heat Health Hub

Director, Heat Resilience & Performance Centre

INTRODUCTION

Global Heat Health Information Network

The Global Heat Health Information Network (GHHIN), an UN initiative co-sponsored by the World Health Organization (WHO), the World Meteorological Organization (WMO), and the US National Oceanic and Atmospheric Agency (NOAA), is a dynamic community of policymakers, scientists, and practitioners working together to mitigate the impact of extreme heat on lives and livelihoods. GHHIN aims to promote evidence-driven interventions, shared-learning, co-production of information, synthesis of priorities, and capacity building through the establishment of regional heat health network hubs around the world. The first hub will be in Southeast Asia, led by the Heat Resilience & Performance Centre (HRPC) at the Yong Loo Lin School of Medicine, National University of Singapore (NUS).

Southeast Asia Heat Health Forum

For the first time, a dedicated and focused meeting will be held in Southeast Asia, championed by the region to discuss issues and impacts of heat health for the region. Themed *"Toward a heat resilient Southeast Asia: Enhancing livelihoods and wellbeing"*, the forum will bring together over 30 speakers and panellists across the specially curated 4-day agenda, providing opportunities to gain diverse perspectives and engage with leading experts.

The forum will focus on urban heat, occupational heat, and community, cultural & traditional perspectives, seeking to understand heat exposure from a multi-sectoral lens, the impacts on people, health, and livelihoods, and to share management enablers in addition to strategies and solutions to address the challenges.

PARTNER WITH US

A Unique Opportunity for Impact

As the First GHHIN Southeast Asia Heat Health Forum is the first of its kind to bring together over 350 stakeholders from across the region and across different expertise and specialties, it presents a unique opportunity and platform to facilitate knowledge sharing, catalyse partnerships, and augment our impact on safeguarding and building heat resilience in our region. As a sponsor, your support will be instrumental in driving regional collaboration and action to effectively manage extreme heat risks in Southeast Asia.

You will have an exclusive opportunity to engage with international thought-leaders, leading experts, practitioners and regional policy makers, in addition to:

- Contributing to defining what heat resilience means in the region
- Support this unique initiative to find answers to the most important heat health challenges of tomorrow
- Strengthen your company's Corporate Social Responsibility profile
- Become part of a global stakeholder network
- Meet key government stakeholders and the decision makers from other stakeholder groups
